XX
DNA encoding monocyte chemo-attractant protein-1 receptor - used partic.
For identifying antagonists and for treating diseases characterised by
T monocytic infiltrates.

XX
Claim 2; Fig 1; 84pp; English.

XX
Claim 2; Fig 1; 84pp; English.

XX
Claim 2 is regeler to the conserved

Gegenerate oligo primers were designed corresp. to the conserved

Gegenerate oligo primers were designed corresp. to the conserved

Gegenerate oligo primers were designed corresp. to the conserved

Gegenerate oligo primers were designed corresp. The degenerate

CC domains of the MIP-labla/ARAWTES receptor, the IL-8 receptors and the

HUNGTRS orphan receptor (GenBank Accession #M99293. The degenerate oligo

CC OGS300. Amplification of CDNA derived from MM6 cells with the primers

CC OGS300. Amplification of CDNA derived from MM6 cells with the primers

CC OGS300. Amplification of CDNA derived from MM6 close a novel

protein. To obtain a full-length version of this close, a MM6 cDNA

CC DEAD COMPA close was obtd. Analysis of additional closes in the MM6 cDNA

CC Aransmembrane domain but contained a different cytoplasmic tail. The CR

CC Transmembrane domain but contained a different cytoplasmic tail. The second sequence appears to represent alternative splicing of the carboxyl

CC transmembrane domain but contained a different cytoplasmic tail. The manner of the MCP-IRB (see Q6297/R79165 & Q6298R79166). Active mature MCP-

CC LETMinal tail of the MCP-IR protein. The two sequences are denoted MCP-

CR has a predicted mol. wt. of about 42,000 daltons. MCP-IRB has a mol.

CC MC about 41,000 daltons. (Updated on 25-MAR-2003 to correct PN

CC Eield.)

Human CCR2a protein

```
This invention describes a novel diagnostic agent (A) comprising at least two different ligands (I) for receptors (II) that are implicated in disease. (A) are used for the diagnosis of tumors (especially colorectal or prostatic), organ rejection, inflammation and autoimmune diseases. Also inhibitors of (I) are used therapeutically against tumors (and their metastases), inflammation (particularly bronchial asthma or chronic bowel inflammation), or autoimmune diseases (rheumatoid arthritis or lupus), where the (cardio) vascular, lymphatic, respiratory, nervous, digestive, endocrine, motor or urogenital systems or skin are affected, and bone marrow diseases. The products of the invention are chemokine derivatives which have cytostatic, antifilammatory, antiasthmatic, immunosuppressive, dermatological, antifhemmatory calls through a chemokines act on specific tumor and inflammatory calls through a constellation of chemokine (CR), which control migration and proliferation of these calls. Ad880148 represent human chemokine fragments used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Diagnostic agent containing two or more receptor-specific ligands, useful for detecting tumors, inflammation etc., also therapeutic use of ligand inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to nucleic acids encoding the chemokines TECK, MIP-Jalpha, MIP-Jabeta, DC CR and M/DC CR. The polypeptide sequences are useful in isolating DNA clones encoding the chemokines, for generating antibodies, and for predicting oligonucleotides for screening a library to isolate species variants. A nucleic acid encoding a chemokine polypeptide can be used to identify genes, mRNA and cDNA species which encoder related or homologous ligands, as well as DNA encoding homologous proteins from different species. The chemokines and artibodies which bind to the polypeptides are useful in the treatment of conditions associated with abnormal physiology or development, including inflammatory conditions such as asthma, abnormal proliferation, regeneration, degeneration and atrophy. This sequence represents the human chemokine receptor-2 (CKR-2) polypeptide, used in the scope of the invention
Human; thymus expressed chemokine; TECK; chemokine; MIP-3alpha; receptor; MIP-3beta; dendritic cell receptor for chemokine; DC CR; M/DC CR; asthma; monocyte/dendritic cell receptor for chemokine; inflammatory condition; abnormal physiology; abnormal proliferation; degeneration; atrophy; antiasthmatic; cytostatic; chemokine receptor-2; CKR-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New chemokines, TECK, MIP-3 alpha, MIP-3 beta, DC CR and M/DCCR, useful for treating conditions associated with abnormal physiology or development, including inflammatory conditions (e.g. asthma), and

that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the control of the polypeptides given in the specification, a method for identifying a compound useful in treating to pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more condulates its activity is useful for preparing a medicament for treating condulates its activity is useful for preparing a medicament for treating conjugation (cit) and spared nerve injury (SNI) in an animal (e.g. gene injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed contains an expectation of the printed contains an expectation of the printed contains an expectation of the printed contains and expectations are secured and any expressed during pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ftp.wipo.int/pub/published_pct_sequences

The invention discloses a composition comprising two or more isolated rat or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying a nucleotide sequence that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more copelypeptides or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (CMUMB), in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:

specification, but was obtained in electronic form directly from WIPO at

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

The invention relates to a novel method for diagnosing and analysing autoimmune disease or arthritides. The method comprises obtaining a sutoimmune disease or arthritides. The method comprises obtaining a patient sample containing mRNA, analysing gene expression using the mRNA that results in a gene expression signature of the mRNA, and using that gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene expression of at least 60% of the genes correlates with that of the gene expression of at least 60% of the genes correlates with that of the gene expression of arthritis; dentification of curther comprises: a treatment of rheumatoid arthritis in a mammal conter than a mouse; diagnosis of rheumatoid arthritis in a mammal, and array or gene chip, specific for rheumatoid arthritis in a mammal, and array or gene chip, specific for rheumatoid arthritis; screening the analyses of autoimmune disease or theumatoid arthritis; screening the induced arthritis; and reducing the symptoms associated with collagentinduced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritides, such as antigout, antiinflammatory, dermatological, and immunosuphatory. The methods and compositions of the present invention are useful for diagnosing and treating autoimmune disease or arthritides, such as rheumatoid arthritis, lupus, ankylosing spondyllitis, fibrositis,

The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the inventing or diagnosing diseases associated with GPCRs of the inventing, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR transgene or in an endogenous GPCR gene; cells derived from the trasngenic mice; kits comprising several mice, each of which has a mutation in a different GPCR polymucleotides of the invention; and kits comprising comprising several mice, each of which has a mutation in a different GPCR polymucleotides of the invention. The city probes which hybridise to GPCR polymucleotides of the invention. The city probes which hybridise to GPCR polymucleotides of the invention. The disponsion is treatment or prevention of a wide variety of the unvention further discloses variants of the GPCR polympetides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, depression, diabetic neuropathy, Parkinson's disease or schizophrenia); disorders of the color or intestine disorders of compound or leukaemia); immune disorders (e.g., augina, cardiac arrhythmia or maemia or leukaemia); immune disorders (e.g., augina, cardiac arrhythmia or Alder and joint disorders (e.g., augina, bone disorders or Alder and disorders (e.g., augina, bone and joint disorders (e.g., augina, contributed deficiency-related diseases); and disorders of the kidmey, liver, lung, brostate, testis, skin, stomach, pancreas, spleen, thymus and character, testis, skin, stomach, pancreas, spleen, thymus and control or the printed specification; those

The invention relates to a substantially pure or isolated polypeptide comprises the mature protein of human TECK (thymus expressed chemokine) whose full length sequence appears as ADGG7837. Also included are an isolated or recombinant nucleic acid, a host cell comprising the area in vector comprising the nucleic acid, a host cell comprising the expression wouse TECK cDNA and protein, thuman chemokines MIP-3alpha and MIP-3beta (and their encoding cDNAS), and the cDNAS and encoded proteins corresponding to human chemokine receptors DCCR (dendritic cell receptor for chemokine) and MDCCR (Monocyte/Gendritic cell receptor chemokine). The polypeptide is useful for treating conditions associated with abnormal physiology or development, including inflammatory conditions, e.g. asthma. The present sequence represents a human
                                                                                                                                                                                                                                                                                                        360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; receptor; thymus expressed chemokine; TECK; MIP-3alpha; MIP-3beta; chemokine receptor; DCCR; dendritic cell receptor for chemokine; M/DCCR; Monocyte/dendritic cell receptor for chemokine; abnormal physiology; development; inflammatory condition; asthma.

The invention describes an isolated polynuclectide encoding a first antibody at least 95-100% identical to a second antibody consisting of an antibody at least 95-100% identical to a second antibody consisting of antibody at least 95-100% identical to a second antibody consisting of a variable heavy (VH) or variable light (VL) domain of the antibody expressed by a hybridoma cell line consisting of XF3.5F1, XF11.1F8, XF27.28.3610, XF27.28.3612, XF27.28.361.38.2. The antibody is useful treating, preventing, ameliorating, prognosing or monitoring cancers or other diseases or disorders e.g. immunologic deficiency syndromes such as blood protein disorders e.g. immunologic deficiency syndromes such as blood protein disorders e.g. immunologic deficiency syndromes such as blood protein disorders e.g. immunologic deficiency syndromes such as blood protein disorders e.g. immunologic deficiency syndromes cortain haematopoietic cells such as endotoxin lethality, nephritis and inflammatory bowel disease, conditions associated with an increase in certain haematopoietic cells such as histiocytosis, defective or aberrant chamotaxis of immune cells or T-cell antigen presenting cell interaction, an infection disease, an autoimmune disease such as Addison's disease, disorder, a viral infection e.g. HIV infection, Kaposi's sarcoma, cardiovascular disorders such as atherosclerosis, lymphocytopenias, or a disease or disorder associated with aberrant expression of novel human G-protein chemokine receptor (CCRS) HDGNR10. This is the amino acid sequence of the WSXWS motif found in class I receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DIYLLINIAISDLLFLITLFLWAHSAANEWVFGNAMCKLFTGLYHIGYFGGIFFIILLTID 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          78 DIYLLNLAISDLLFLITLPLWAHSAANEWVFGNAMCKLFTGLYHIGYFGGIFFIILLTID 137

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                           The invention relates to a method of producing an antibody, involving immunising an animal with a human G-protein chemokine receptor (HDCNR10) polypeptide (also referred to as a human 7-transmembrane receptor) and recovering an antibody which binds the polypeptide. The method is useful for producing an antibody which binds specifically to the human G-protein chemokine receptor polypeptide. This sequence represents the monocyte chemoattractant protein 1 (MCP-1) receptor which shares homology with the HDGNR10 polypeptide of the invention

The invention describes a new isolated polymucleotide that encodes an antibody (AB1) comprising an amino acid sequence of at least one, two or three complementarity determining regions (CDR) of a heavy chain variable (VH) domain of an antibody (AB2) that immunospecifically binds to a G-protein chemokine receptor (CTRs), at least one, two or three CDR regions of a light chain varaible (VL) domain of AB2 or at least one, two or three CDR regions of both a VH and a VL domain of AB2. The antibody is useful for detecting, diagnosing, prognosing or monitoring cancers and other hyperproliferating and for treating, preventing or ameliorating a disease or disorder. This is the amino acid sequence of MCP-1, a ligand of human G protein chemokine receptor (CCRS) HDGNRIO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel receptor polypeptide (I) selected from (i) a fully defined 329 amino acid sequence (II) fully disclosed in the specification; and (ii) a polypeptide encoded by the cDNA contained in a plasmid, and fragments, analogs and derivatives of the polypeptide. The products of the invention have antiinflammatory, immunomodulatory, anticoagulant, antiallergic, immunosuppressive, vulnerary, cytostatic, antiparasitic, antipsoriatic, antirheumatic, antiarthritic and vasotropic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for screening compounds which bind the G-protein chemokine receptor HDGNR10 (CCR5). Compounds identified by the method of the invention are useful for stimulating haematopolesis, wound healing, cosqulation, angiogenesis, for treating solid tumours, chronic infections, postriasis and for stimulating growth factor activity. The compounds are also useful for treating allergy, anaphylaxis, atterored atterored in the compounds are also useful for treating allergy, anaphylaxis, atterored atterored allergic reactions, prostaglandin-independent fever, bone marrow failure, silicosis, sarcoidosis, rheumatoid arthritis, shock and hyper-eosinophilic syndrome. The present sequence is a human MCP-1 receptor protein. This sequence is used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            11

activity and can be used for gene therapy. The G-protein chemokine receptors, HDGNR10, (I) are useful for screening for compounds which activate or inhibit activation of (I). The products of the invention can also be used for stimulating haematopoiesis, wound healing, coagulation, angiogenesis, treating solid tumours, chronic infections, leukemia, T-cell mediated autoimmune diseases, parasitic infections, psoriasis, antimulating growth factor activity. HDGNR10 is useful for treating allergy, atherogenesis, anaphylaxis, malignancy, chronic and acute inflammation, histamine and immunoglobulin B (IgB)-mediated allergic reactions, prostaglandin-independent fever, bone marrow failure, sillicosis, sarcoidosis, rheumatoid arthritis, shock and hyperecsinophilic syndrome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               226 PYNIVILLINTFQEFFGLSNCESTSQLDQATQVTETLGMTHCCINPIIYAFVGEKFRSLFH 285
                                                                                                                                                                          The invention relates to a novel human 7-transmembrane receptor, HDGNR10, which has been identified as a G-protein chemokine receptor. The GPCR HDGNR10 polypeptide can be expressed by standard recombinant methodology. Compounds that activate or inhibit the receptor polypeptide, optionally expressed from DNA in gene therapy vectors, are used to treat diseases that require: (a) activation of the receptor (e.g. stimulation of harmatopoiesis, treatment of solid tumours, T-cell mediated autoimmune diseases, parasitic infections, psoriasis etc.); or (b) inhibition of the receptor (e.g. allergy, inflammation, rheumatoid arthritis, silicosis etc.) The present sequence represents a human MCP-1 receptor used in comparison studies with the HDGNR10 receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PYNIVILLNTFQBFFGLSNCBSTSQLDQATQVTETLGMTHCCINPIIYAFVGBKFRSLFH 317

The invention provides a human G-protein chemokine receptor (CCR5) HDGNR10 polymucleotide, polypeptides, and antibodies. The antibody that is an antagonist of HDGNR10 is potentially useful for preventing or treating allergy, atherogenesis, anapylaxis, malignancy, chronic and acute inflammation, histamine and IgB-mediated allergic reactions, prostaglandin-independent fever, bone marrow failure, silicosis, rheumatoid arthritis, shock and hypereosinophilic syndrome. The compounds that bind to and activate the receptor are potentially useful for stimulating haematopoiesis, wund healing, coagulation and angiogenesis, and in treating solid tumours, chronic infections, peoriasis. The antibody may also be used as a diagnostic reagent. The present sequence is a human MCP-1 receptor fragmostic reagent. The present sequence is a human MCP-1 receptor fragmostic reagent. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Croment: This protein is a cell-surface receptor which recognizes extracellular signal
Comment: This protein is a key regulator of many immune and homeostatic responses, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ç
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RiRaport, C.J.; Schweickart, V.L.; Eddy Jr., R.L.; Shows, T.B.; Gray, P.W. Gene 163, 295-299, 1995
Astricle: The orphan G-protein-coupled receptor-encoding gene V28 is closely related A, Reference number: JC4304; MUID:96011651; PMID:7590284

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

J. Immunol. 165:5295-5303(2000).

-!- FUNCTION: Receptor for the MCP-1, MCP-3 and MCP-4 chemokines.

-!- FUNCTION: Receptor for the MCP-1, MCP-3 and MCP-4 chemokines.

Transduces a signal by increasing the intracellular calcium ions level. Alternative coreceptor with CD4 for HIV-1 infection.

-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     R PERINTS; PRODO1; 7tm 1; 1.

J. Neuroimmunol. 86:1-12(18.9);

-I- FUNCTION: Receptor for the MCP-1 (JE), MCP-3 (FIC) and MCP-5 chemokines. Transduces a signal by increasing the intracellular calcium ions level (By similarity).

-I- SUBCELLULAR LOCATION: Integral membrane protein.

-I- TISSUE SPECIFICITY: Expressed in lung, spleen, kidney, thymus and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

    macrophages.
    INDUCTION: In animals in which experimental allergic encephalomyelitis (EAB) has been induced.
    SIMILARITY: Belongs to the G-protein coupled receptor 1 family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Extracellular (Potential).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MLSTSRSRFIRNTNESGEEVTTFFDYDYGAPCHKFDVKQIGAQLLPPLYSLVFIFGFVGN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                 chemokines. Transduces a signal by increasing the intracellular calcium ions level.
--- SUBCELIULAR LOCATION: Integral membrane protein.
--- TISSUE SPECIFICITY: Detected in monocyte/macrophage cell lines, but not in nonhematopoietic cell lines.
--- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
FUNCTION: Receptor for the MCP-1 (JE), MCP-3 (FIC) and MCP-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB 1; Length 373;

25. Zhang Y., Ryder O.A., Zhang Y.;

26. Zhang Y., Ryder O.A., Zhang Y.;

27. Submitted (AUC1999) to the EMBL/GenBank/DDBJ databases.

28. STATIONS INTEGERAL membrane protein (By similarity).

29. STATIONS INTEGERAL MEMBRITY: Belongs to family 1 of G-protein coupled receptors.

20. STATIONS INTEGERAL CONTRESS OF A STATIONS INTEGERAL.

20. GO:0016493; F:C-C chemokine receptor activity; IEA.

20. GO:0016493; F:C-C chemokine receptor activity; IEA.

20. GO:000186; F:Receptor activity; IEA.

30. GO:000186; F:Receptor activity; IEA.

Shibata R., Yoder A., Pillai S., Kuiken C., Marx P., Wolinksy S.;
Submitted (JUL.1993) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
